BIO PK 5-8
PRODUCT SHEET

Liquid organic fertiliser N-P-K: 2-5-8 with natural sugars, stone dust, micronutrients and seaweed extract.

Available in 500ml, 1L bottles and 5L jerrycans.

Bio PK 5-8 is a liquid organic fertiliser made from premium quality organic ingredients. This product is designed to provide plants with essential nutrients, a complete range of trace elements, and a bio-stimulating effect. It is especially formulated to enhance **flower yield** and improve fruit quality.

The formulation of Bio PK 5-8 includes natural sugars, stone dust elements, micronutrients, and seaweed extract. The natural sugars promote the development of soil micro-life, as well as being a supplementary source of energy for the plant. The stone dust elements improve the soil structure and promote root development. The micronutrient base provides important trace elements for complete nutrition. The seaweed extract, on the other hand, provides vitamins, phytohormones and other substances that stimulate plant growth.

Bio PK 5-8 is easily absorbed by the plants, resulting in high yields and excellent flowering.

BIO TABS.NL ORGANIC GROWING

Product benefits

· Enhances flower yield.
· Improves fruit quality.
· Ensures stable plant growth.
· Provides a compact root system.
· Increases abiotic stress tolerance.
· Efficient nutrient uptake.

Guaranteed analysis

Total nitrogen (N)	2%
Total (P_2O_5)	5%
Total (K_2O)	8%
Organic matter	30%
pH	6

Aditionally contains:

Micronutrients: Ca, Mg, Fe, Mn, Zn, S, Cu, and others.
